Abstracts

Electronic Manufacturing Services (EMS) for medical devices is a one-stop outsourcing service model that provides medical device brands with services ranging from design, raw material procurement, manufacturing, to logistics and distribution. Due to high technological barriers and strong customization requirements, the gross profit margin in this field is generally higher than that of traditional electronics manufacturing. High-end medical devices, such as medical imaging equipment and surgical robots, can achieve gross profit margins of 60%-70%, and some companies can exceed 70% by optimizing their product structure (such as increasing the proportion of mid-to-high-end products) or increasing service revenue.The main market drivers include:Technological Iteration Drives Demand UpgradesThe evolution of medical electronics technology towards miniaturization and intelligence is driving EMS manufacturers to upgrade their manufacturing capabilities. For example, wearable medical devices require the integration of multimodal sensors (such as ECG+PPG+temperature), demanding that EMS manufacturers possess high-density PCB layout and low-power design capabilities; surgical robot manufacturing requires mastery of core technologies such as force feedback control and visual navigation. Technological upgrades are enabling EMS manufacturers to transform from simple manufacturing to "manufacturing + technology empowerment," increasing added value.Expanded Application Scenarios Create Incremental Space Population aging and the downward shift of medical resources are generating new demands. Demand for portable ultrasound machines and home oxygen concentrators is surging in primary healthcare institutions, with the Chinese primary healthcare equipment market exceeding 100 billion yuan in 2024; consumer-grade medical electronics (such as smart bracelets and home beauty devices) are rapidly penetrating through e-commerce channels, with the global market size expected to reach 30 billion US dollars in 2025. EMS manufacturers are opening up new growth

points by focusing on niche markets (such as medical aesthetic equipment and rehabilitation robots). Policy and capital are accelerating industry consolidationMany countries worldwide have designated medical electronics as a strategic industry, supporting domestic companies through subsidies and tax incentives. For example, China's 14th Five-Year Plan explicitly supports the research and development of high-end medical equipment, encouraging EMS manufacturers and brand owners to jointly tackle core technologies. At the capital level, leading companies expand through mergers and acquisitions (such as Flextronics' acquisition of medical electronics companies), while smaller manufacturers focus on niche markets (such as manufacturers specializing in endoscope OEM manufacturing), creating differentiated competition. Driven by both policy and capital, industry concentration is increasing, with leading companies consolidating their market position through technological and scale advantages.

The global Medical Devices Electronics Manufacturing Services (EMS) market size was estimated at USD 15097.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
