Report Overview

Medical Dialysis Consumables refers to the material used in hemodialysis. Hemodialysis, also spelled haemodialysis, or simply dialysis, is a process of purifying the blood of a person whose kidneys are not working normally. This type of dialysis achieves the extracorporeal removal of waste products such as creatinine and urea and free water from the blood when the kidneys are in a state of kidney failure. Hemodialysis is one of three renal replacement therapies (the other two being kidney transplant and peritoneal dialysis). An alternative method for extracorporeal separation of blood components such as plasma or cells is apheresis.

The global Medical Dialysis Consumables market size was estimated at USD 12150.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.75% during the forecast period.
