Abstracts

Medical foam dressing is a soft, porous and highly absorbent wound care product made of polymer materials (such as polyurethane or silicone). It is mainly used to manage wound exudate, maintain a moist environment and promote healing. It has good air permeability and cushioning properties, can effectively absorb a large amount of exudate, reduce the risk of wound infection, and avoid adhesion between the dressing and the wound, reducing pain during dressing changes. Medical foam dressings are widely used in the care of various wound surfaces such as acute wounds, chronic wounds, burns, postoperative wounds and pressure sores. They are suitable for wounds with different exudates and provide different degrees of protection and comfort. According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years.
