Report Overview

Medical foods are a specialized category of products that are formulated to meet distinctive nutritional requirements for specific medical conditions or diseases. Unlike typical dietary supplements, medical foods are intended for the dietary management of a disease or condition that has distinctive nutritional requirements. These products are specially formulated and processed to be consumed or administered under the supervision of a healthcare provider. Medical foods are not drugs, but they are regulated by the FDA under the Orphan Drug Act and must meet specific criteria to be classified as such.

The market for medical foods is experiencing steady growth due to several key market trends and drivers. At the same time, advancements in food technology and research are enabling the development of more effective and targeted medical food products, further fueling market growth.
