Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Medical Gradient Coil competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Medical Gradient Coil is a crucial component of an MRI (Magnetic Resonance Imaging) system used to create controlled, spatially varying magnetic fields. These coils generate gradient magnetic fields along different spatial axes (X, Y, and Z), which superimpose on the main static magnetic field to encode spatial information of the body being scanned. This spatial encoding allows the MRI system to localize signals from specific areas inside the body, enabling the creation of detailed cross-sectional images.

The global Medical Gradient Coil market size was estimated at USD 108.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
