## Abstracts

Industrial Personal Computer (IPC) is a reinforced and enhanced personal computer. IPC is a general term for a tool that uses a bus structure to detect and control the production process, electromechanical equipment, and process equipment. The industrial computer has important computer attributes and features, such as a computer CPU, hard disk, memory, peripherals and interfaces, as well as an operating system, control network and protocols, computing power, and a friendly human-machine interface. IPCs often run in harsh environments and require higher data security. Therefore, IPCs are usually designed for reinforcement, dustproof, moisture-proof, corrosion-proof, and radiation-proof. A medical IPC can be easily configured into a communication hub for care delivery team collaboration or a multi-media patient engagement tool. According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.

The global Medical IPC (Industrial Personal Computer) market size was estimated at USD 1859.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
