Medical laser image films are specialized photosensitive films designed for use in medical imaging systems that utilize laser printers, particularly for applications such as computed radiography (CR) and digital radiography (DR), where they serve as the final hard-copy output for diagnostic purposes by producing high-resolution, high-contrast images from digital data. These films are characterized by their sensitivity to specific laser wavelengths, fine grain structure, and consistent quality to ensure accurate representation of anatomical details, and they are typically used in modalities like mammography, orthopedics, and general radiography, where permanent, archival-quality images are required for clinical evaluation, patient records, or regulatory compliance.
