Abstracts

Medical liquid solidifiers, also known as fluid solidification agents or gelling agents, are specialized chemical products designed to transform liquid medical waste?such as blood, bodily fluids, or pharmaceutical liquids?into a semi-solid or solid state for safer handling, transport, and disposal. These products typically utilize absorbent polymers, such as superabsorbent polymers (SAPs) or cross-linked polyacrylates, which rapidly encapsulate liquids, reduce spill risks, minimize odor, and help prevent environmental contamination or exposure to pathogens. They are commonly used in healthcare settings, laboratories, and by emergency response teams to manage biohazardous fluids in compliance with regulatory standards for medical waste.

The global Medical Liquid Solidifier market size was estimated at USD 280.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
