Abstracts

A medical ophthalmic knife is a specialized surgical instrument designed for precision cutting and dissection in ophthalmic procedures, including cataract surgery, corneal transplantation, and glaucoma surgery. These knives are characterized by their ultra-fine, sharp blades, often made from high-grade stainless steel or diamond, and are engineered to create precise incisions with minimal tissue trauma. They come in various designs?such as crescent, slit, or angled blades?tailored to specific surgical needs, and may be disposable or reusable, with sterilization protocols strictly followed to prevent infection.
