Abstracts

Medical Optical Imaging Technology refers to a set of non-invasive or minimally invasive imaging techniques that use light (visible, near-infrared, ultraviolet, or other optical wavelengths) to visualize internal structures, tissues, or physiological processes within the human body. These technologies leverage interactions between light and biological tissues (such as absorption, scattering, reflection, fluorescence, or polarization) to generate detailed images, enabling the detection, diagnosis, and monitoring of diseases, as well as guiding medical procedures. They often provide high-resolution, real-time, and functional information (e.g., blood flow, oxygenation levels) with minimal harm to living tissues.

The global Medical Optical Imaging Technology market size was estimated at USD 2372.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.90% during the forecast period.
