Report Overview

Medical oxygen concentrators and cylinders are devices used to administer supplemental oxygen to individuals with respiratory conditions or those in need of oxygen therapy. A medical oxygen concentrator is a device that extracts oxygen from the air and delivers it to the patient at a higher concentration. It uses air as a source and filters out other gases, producing purified oxygen that can be inhaled through a nasal cannula or mask. On the other hand, medical oxygen cylinders are portable tanks filled with pure oxygen. These cylinders are made of materials like aluminum or steel and are pressurized to store a large volume of oxygen. The oxygen from cylinders is released through a regulator and can be delivered to the patient through a mask or tubing.
