The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Medical PE Release Liner competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Medical PE release liner is a high-cleanliness functional film made from polyethylene (PE) through surface treatment and silicone oil coating. It has good flexibility, stable peel strength, excellent biocompatibility and non-toxic properties. It is suitable for medical dressings, sanitary products, medical devices and other fields. The core upstream raw material is high-purity medical-grade polyethylene resin, which features low precipitation, is non-toxic, has excellent heat-sealing properties, and stable mechanical properties. Supporting raw materials also include medical-grade silicone oil (for release coatings), surface treatment agents, antimicrobial additives, and functional materials related to the coating process. The downstream supply chain is concentrated in medical device and consumables manufacturers, who have strict standards for release film peel strength, cleanliness, biocompatibility, and sterile packaging. Global production in 2024 is expected to be approximately 45 million square meters, with an average market price of approximately US\$1.9 per square meter. Major industry players will have gross profit margins ranging from 16% to 30%. Annual production capacity for a single production line is estimated to be 6?15 million square meters.

The global Medical PE Release Liner market size was estimated at USD 86.27 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
