Abstracts

Medical polyoxymethylene (POM), often referred to as acetal resin or polyacetal, is a high-performance engineering thermoplastic specifically engineered and certified for medical and pharmaceutical applications, distinguished from industrial-grade POM by its compliance with stringent regulatory standards such as USP Class VI, ISO 10993, and FDA requirements for biocompatibility, sterilizability, and low extractables. It is characterized by high mechanical strength, stiffness, low friction, excellent dimensional stability, and resistance to chemicals and hydrolysis, making it suitable for precise, durable, and reliable components in medical devices, including inhalers, drug delivery systems, surgical instruments, insulin pens, and connectors for fluid handling, where repeated sterilization (via autoclave, gamma radiation, or ethylene oxide) and contact with bodily fluids or pharmaceuticals are common.

The global Medical Polyoxymethylene market size was estimated at USD 1075.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.
