Abstracts

Medical post-surgery compression bras are specially designed garments intended to provide support and promote healing after surgeries such as breast augmentation, mastectomy, or reduction. These bras apply gentle, consistent pressure to the chest area, which helps reduce swelling, bruising, and discomfort while ensuring proper alignment of the surgical site. They also assist with enhancing blood circulation and reducing the risk of complications like seromas (fluid build-up) by encouraging the body's natural healing process. Made from soft, breathable materials, medical post-surgery compression bras are designed for comfort and to facilitate a smooth recovery, with adjustable straps and closures for a customized fit. They are an essential part of post-surgery care, offering both physical and emotional support to individuals during their recovery journey.
