Abstracts

A Raman spectrometer is a device that can analyze chemical structures and evaluate physical properties by measuring the light scattered when a substance is irradiated with light. Scattered light contains light of various wavelengths, with a light of the same wavelength as the incident light being called Rayleigh scattered light and light of a different wavelength being called Raman scattered light. The Raman spectrometer analyzes and evaluates by detecting the Raman scattered light. The Raman spectrometer consists of a laser light source, a diffraction grating, and a sensitive detector for detecting weak Raman scattered light. It can measure the structure of almost any material, regardless of whether it is a gas, liquid, or solid, without any preprocessing. Raman spectroscopy is a noninvasive optical technique that can be used as an aid in diagnosing certain diseases and as an alternative to more invasive diagnostic techniques such as the biopsy. Due to these characteristics, Raman spectroscopy is also known as an optical biopsy technique. The success of Raman spectroscopy in biomedical applications is based on the fact that the molecular composition of healthy tissue is different from diseased tissue; also, several disease biomarkers can be identified in Raman spectra, which can be used to diagnose or monitor the progress of certain medical conditions. According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and

treatment.

The global Medical Raman Spectrometer market size was estimated at USD 121.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.30% during the forecast period.
