Medical scavenging systems are engineered safety devices used predominantly in hospital operating rooms and veterinary clinics to capture and remove waste anesthetic gases (WAGs) and vapors expelled from a patient's breathing circuit during anesthesia administration, preventing their release into the ambient air and thereby minimizing occupational exposure risks to healthcare staff. These systems typically interface with anesthesia machines and employ either passive or active mechanisms?using hospital vacuum systems or dedicated pumps?to safely collect and dispose of hazardous gases through dedicated piping, ensuring compliance with health regulations and maintaining air quality in clinical environments.
