Abstracts

Surgical suture is a medical device used to hold body tissues together after an injury or surgery. A significant driver in the medical surgical sutures market is the growing number of surgical procedures worldwide. With the rising demand for surgical interventions, there is a corresponding increase in the need for reliable and advanced sutures to close wounds effectively. However, a notable challenge in this market is the shift towards minimally invasive surgeries, which often require fewer or no sutures. This trend, along with the demand for cost-effective healthcare solutions, poses a challenge to the traditional suture market.
