## Abstracts

A Medical Transcranial Magnetic Stimulator (rTMS) is a non-invasive neuromodulation device that uses magnetic fields to stimulate specific areas of the brain to treat various neurological and psychiatric disorders, such as depression, anxiety, obsessive-compulsive disorder (OCD), and chronic pain. The device generates brief magnetic pulses that induce electrical currents in the targeted brain regions, modulating neuronal activity to alleviate symptoms. rTMS is typically used for patients who have not responded to medication or other conventional treatments. As a non-invasive therapy with minimal side effects, rTMS has become an important treatment option in the fields of psychiatry and neurology, offering a safer alternative to more invasive procedures. The Medical Transcranial Magnetic Stimulator (rTMS) market is primarily driven by the increasing prevalence of psychiatric and neurological disorders, particularly depression, which remains one of the leading causes of disability worldwide. As more patients seek alternative treatments for conditions that are resistant to medication, rTMS has gained recognition for its effectiveness, especially in cases where traditional therapies fail. Moreover, advancements in rTMS technology, such as improved treatment protocols, better patient targeting, and enhanced device portability, are expanding its applications and making it more accessible to a broader patient population. The non-invasive nature of rTMS, combined with its relatively low risk of side effects, makes it an attractive option for both patients and healthcare providers. However, the market faces several challenges, including the high cost of rTMS devices and treatment sessions, which can limit accessibility, especially in low-resource settings or for patients without adequate insurance coverage. Additionally, while rTMS has shown promise in treating various mental health disorders, its adoption is still somewhat limited by a lack of widespread awareness and understanding of the technology among both healthcare providers and patients. Furthermore, the regulatory landscape for rTMS treatments varies by country, which can create barriers to market

entry and the expansion of services in certain regions. These factors may slow the overall growth of the rTMS market despite its clinical potential.

The global Medical Transcranial Magnetic Stimulator market size was estimated at USD 220.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.00% during the forecast period.
