Abstracts

Medical ultrasound paper, also known as ultrasound transducer cover or probe cover, is a single-use, sterile or non-sterile sheath designed to maintain hygiene and prevent cross-contamination during ultrasound procedures by creating a barrier between the patient's skin and the ultrasound transducer. These covers are typically made from latex-free materials such as polyethylene or polyurethane to accommodate patient allergies and ensure compatibility with ultrasound gel, allowing for clear imaging while protecting both the equipment and the patient from potential pathogens. The product is essential in various medical settings, including obstetrics, cardiology, abdominal imaging, and emergency departments, where infection control protocols mandate the use of disposable protective barriers for reusable medical devices.

The global Medical Ultrasound Papers market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of -3.25% during the forecast period.
