Abstracts

Medical vial rubber stoppers are specialized elastomeric closures designed to seal vials containing pharmaceutical liquids, lyophilized powders, or other sterile preparations, ensuring hermeticity, chemical compatibility, and sterility while allowing safe needle penetration for drug withdrawal. These components are critical in maintaining product integrity by preventing contamination, moisture ingress, and gas exchange, and they must comply with stringent regulatory standards (such as USP, EP, and FDA requirements) regarding extractables, leachables, and particulate matter. Typically manufactured from materials like bromobutyl or chlorobutyl rubber for their low permeability and high purity, rubber stoppers may also feature coatings (e.g., fluoropolymer films) to reduce adsorption, improve lubricity, and enhance stability with sensitive drug formulations.

The global Medical Vial Rubber Stopper market size was estimated at USD 685.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
