Medical waste consists of discarded biological products removed from health care facilities. The 1988 Medical Waste Tracking Act defines medical waste as the waste material generated during medical research, testing, diagnosis, immunization, or treatment of either human beings or animals. Disposal of medical waste is a major challenge faced by health care providers. Medical waste is composed of contaminated blood, body fluids, body parts, infectious sharps, or other potentially hazardous biological material. Medical waste containers are used by waste generators to collect waste that is generated by health care facilities. According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years.
