Report Overview

Medical waste or hospital waste is any kind of waste containing infectious (or potentially infectious) materials. It may be solid or liquid. Examples of infectious waste include discarded blood, sharps, unwanted microbiological cultures and stocks, identifiable body parts (including those as a result of amputation), other human or animal tissue, used bandages and dressings, discarded gloves, other medical supplies that may have been in contact with blood and body fluids, and laboratory waste that exhibits the characteristics described above. Waste sharps include potentially contaminated used (and unused discarded) needles, scalpels, lancets and other devices capable of penetrating skin. Off-site medical waste service is a far more cost-effective option for most small and mid-sized medical practices and facilities. Third-party vendors whose main business is healthcare waste collection and disposal have the equipment and training needed to handle the process. Vendors can collect the waste either by truck or by mail.

The global Medical Waste Disposal Service market size was estimated at USD 6825.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.85% during the forecast period.
