Mediceal drains are medical devices used to remove fluid or air from a wound or body cavity to prevent the accumulation of fluids and promote healing. These drains are typically made of soft, flexible materials such as silicone or latex and come in various shapes and sizes to suit different surgical needs. They are commonly used in procedures such as mastectomies, abdominoplasties, and orthopedic surgeries. Mediceal drains play a crucial role in post-operative care by reducing the risk of infection and other complications associated with fluid buildup.
