Report Overview

Medicinal activated charcoal, also known as activated carbon, is a form of charcoal that has been specially processed to increase its surface area and absorptive properties. It is created by heating charcoal or carbon-rich materials, like wood or coconut shells, to a high temperature with steam or chemicals. This process creates a porous structure with millions of tiny pores that can trap and bind certain chemicals, toxins, or gases.

Medicinal activated charcoal is primarily used in medical and healthcare settings, both internally and externally, to treat certain poisonings, drug overdoses, and to filter out harmful substances in water or air purification systems.

The global Medicinal Activated Charcoal market size was estimated at USD 392.46 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
