Abstracts

Medicinal charcoal tablets, also known as activated charcoal tablets, are over-the-counter pharmaceutical products composed of highly porous carbon derived from organic materials like coconut shells, wood, or peat, which undergoes activation to increase its surface area and adsorption capacity. These tablets are primarily used to adsorb toxins, chemicals, and gases in the gastrointestinal tract, making them a common remedy for acute poisoning, drug overdoses, and symptomatic relief from gas, bloating, or indigestion. While not systemically absorbed, their efficacy relies on the physical process of binding substances, and they are often utilized in emergency medicine, digestive health, and detoxification contexts, though usage must be timely and cautious due to potential interactions with medications and nutrients.

The global Medicinal Charcoal Tablets market size was estimated at USD 385.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
