Report Overview

Medicinal bottles were similar to liquor bottles (another very diverse category) in that bottle design was not inherently constrained by some quality of the contained product, i.e., the contents were not typically carbonated which demanded heavier glass and typically a round body shape.

Generally speaking the glass thickness of medicinal bottles is distinctly less than for soda/mineral water, beer, champagne, and most wine bottles. That is a diagnostic feature that can be useful in bottle fragment identification at times. Most medicinal bottles also had a narrow neck and mouth (aka bore or throat) since this conformation was most useful for pouring out the typically liquid contents. A narrow neck and bore likely limited evaporation through or around the cork also.
