Abstracts

Medium Density Fibre Board (MDF) is an engineered wood product manufactured by breaking down hardwood or softwood residuals into wood fibers, combining these fibers with wax and a synthetic resin binder such as urea-formaldehyde or melamine, and forming panels by applying high temperature and pressure. The resulting material is characterized by its uniform density, smooth surface, fine texture, and lack of knots or grain patterns, making it highly suitable for applications requiring precise machining, stability, and a consistent substrate for finishes such as painting, veneering, or laminating. It is widely used in furniture manufacturing, cabinetry, millwork, flooring substrates, and interior construction due to its cost-effectiveness, dimensional stability, and versatility compared to solid wood or particle board.

The global Medium Density Fibre Board market size was estimated at USD 699.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
