Abstracts

Medium efficiency filters are air filtration devices designed to capture particles in the 1?10 micron range, typically using materials such as pleated synthetic media, fiberglass, or electrostatically charged fibers to trap dust, pollen, mold spores, and other airborne contaminants. These filters are commonly rated on the MERV (Minimum Efficiency Reporting Value) scale, generally falling between MERV 5 and MERV 12, making them suitable for a wide range of residential, commercial, and light industrial applications where a balance between filtration performance, airflow resistance, and cost is required. They serve as an intermediate option between basic low-efficiency filters and high-efficiency alternatives like HEPA filters, often integrated into HVAC systems to improve indoor air quality while maintaining system efficiency and longevity.

The global Medium Efficiency Filter market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
