## Abstracts

A medium format mirrorless camera is a mirrorless camera that uses a medium format sensor (usually larger than a full-frame sensor). The size of a medium format sensor is usually between 44mm x 33mm and 53.7mm x 40.4mm, which is much larger than the 36mm x 24mm sensor of a full-frame camera. Due to the larger sensor area, medium format cameras are able to capture more details, higher dynamic range and lower noise, and are particularly suitable for high-quality commercial photography, landscape photography and portrait photography. Medium format cameras usually have a very high pixel count (such as 100MP and above), which can output extremely high-resolution images.

The global Medium Format Mirrorless Camera market size was estimated at USD 180.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
