The non-media holographic teleprompter is a physical medium-free display device that uses holographic technology to project text or images for users to view in the air or on a transparent screen. Unlike traditional teleprompters, the non-media holographic teleprompter does not rely on traditional display screens or paper media, but presents virtual text or images in space through holographic projection, which has higher flexibility and visual effects. The device is widely used in scenes such as speeches, broadcasts, news interviews, and film and television shooting. It can display text content in real time, helping speakers or hosts to express themselves fluently without having to look down at the teleprompter.
