## Abstracts

A supercapacitor, also known as an electric double-layer capacitor, is a special type of capacitor that exhibits properties between conventional capacitors and rechargeable batteries. Unlike batteries that store charge through chemical reactions, supercapacitors store charge by adsorbing ions on the surface of activated carbon electrodes immersed in an electrolyte, forming an electric double layer. As a result, while batteries require hours to charge, supercapacitors can be charged in a matter of seconds. Furthermore, unlike batteries that have limited charging cycles, supercapacitors are theoretically unlimited in their cycle life.

The global Medium and Large Capacity Electric Double Layer Capacitor market size was estimated at USD 1102.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.80% during the forecast period.
