Abstracts

Fiber Cement Board is a building material used to cover the exterior of a building in both commercial and domestic applications. Fiber cement is a composite material made of sand, cement and cellulose fibers. It is widely used in both commercial and residential applications. Low density is generally used for low-grade building ceiling partitions and other parts, medium density is generally used For mid-range building partition wall ceilings, and the deformation coefficient of medium and low-density products is smaller. According to the Japan Cement Association, Japan's cement industry emitted about 40 million tons of carbon dioxide in 2020. And the cement industry became the fourth largest source of carbon dioxide emissions in the industrial sector after electricity, steel and chemicals. 60% of the cement industry's carbon emissions come from process emissions, 35% from combustion emissions and 5% from indirect emissions from electricity. According to our 'Building Materials Research Institute', the global clinker capacity in 2022 was about 3.55 billion tons, and the global cement production was about 4.0 billion tons. According to the National Bureau of Statistics, China's cumulative cement output reached 2.118 billion tons in 2022.

The global Medium and Low Density Fiber Cement Board market size was estimated at USD 631.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
