## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Medium-Pressure Chromatography Column competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Medium-pressure chromatography columns are pressure-resistant columns designed for high-performance liquid separations within the 1-10 bar pressure range. Typically constructed from glass, PEEK, or stainless steel, they are filled with functionalized chromatographic media such as agarose, polystyrene, or silica. They are suitable for medium-scale preparation and purification of proteins, peptides, nucleic acids, or natural products. These columns can be coupled with medium-pressure chromatography systems (such as the AKTA?) to achieve precise control of flow rates and gradients. They offer high separation efficiency, excellent reproducibility, and ease of scale-up, making them widely used in biopharmaceuticals, life science research, and industrial separation and purification. In 2024, the global production of medium-pressure chromatography columns will reach 1,446,610 units, with an average selling price of US\$306 per unit.

The global Medium-Pressure Chromatography Column market size was estimated at USD 442.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
