Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Medium-sized Wind Power Gearbox (1.5MW-3MW) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Medium-sized wind power gearboxes (1.5MW-3MW) are the core transmission devices used in wind turbines to achieve the conversion of low-speed rotation of the wind rotor (usually 10-25rpm) to high-speed rotation of the generator (1000-1800rpm). Their power levels cover the range of 1.5MW to 3MW and are suitable for onshore and offshore wind farms. This type of gearbox usually adopts a combination of planetary gear structure and two-stage parallel shaft structure design, with high torque density ($\approx 200\text{Nm/kg}$), low transmission ratio error ($\approx 0.5\%$) and long life (design life of 20 years). The material is high-strength alloy steel (such as 18CrNiMo7-6) and surface hardening treatment. The design must comply with GL specifications and IEC 61400-1 standards, and integrate lubrication and cooling systems and condition monitoring interfaces to meet the stringent requirements of wind power equipment for lightweight, high efficiency and maintenance-free.

The global Medium-sized Wind Power Gearbox (1.5MW-3MW) market size was estimated at USD 2027.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
