Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Medium Styrene Rubber (Bound Styrene Content 35%?45%) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of medium-styrene rubber will reach 72,683 kilotons, with an average selling price of \$2,054 per ton. Medium-styrene rubber refers to styrene-butadiene rubber (SBR) with a styrene content of 35%?45%. It is a synthetic rubber produced by the random copolymerization of butadiene and styrene. The styrene unit accounts for a significant proportion of the molecular chain, typically between 35% and 45%, imparting high rigidity and hardness to the material, while the butadiene unit provides basic flexibility. Due to its high styrene content, this type of rubber exhibits excellent tensile strength and abrasion resistance, but exhibits relatively low elasticity and weaker cold resistance than natural rubber. It is often prepared using an emulsion polymerization process, which precisely controls the styrene content by adjusting the monomer ratio and polymerization conditions. It is widely used in tires, footwear, and high-strength industrial rubber products.

The global Medium Styrene Rubber (Bound Styrene Content 35%?45%) market size was estimated at USD 149.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
