## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Medium Voltage Armoured Conductor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of medium-voltage armored conductor reached approximately 1.51 billion meters, with an average selling price US\$2.2 per meter. This type of power transmission cable, rated between 6 kV and 35 kV and protected by a metal armor layer, is widely used in urban underground power grids, industrial parks, petrochemical plants, mine tunnels, railways, and wind power plants, where mechanical resistance and high safety are crucial. Its basic structure consists of a copper or aluminum conductor, a cross-linked polyethylene (XLPE) insulation layer, a metal shield, a steel tape or steel wire armor layer, and an outer jacket. It offers excellent resistance to compression, tearing, gnawing, and corrosion, enabling long-term, stable operation in complex underground environments, shafts, and confined spaces. Common product types include single-core or three-core constructions, with outer diameters ranging from 20 mm to 70 mm. Depending on the installation method, it can be constructed with steel tape armor (STA), fine steel wire armor (SWA), or galvanized steel wire braid.

The global Medium Voltage Armoured Conductor market size was estimated at USD 3322.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
