Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Medium Voltage Ring Main Units competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In an electrical power distribution system, a ring main unit (RMU) is a factory assembled, metal enclosed set of switchgear used at the load connection points of a ring-type distribution network. It includes in one unit two switches that can connect the load to either or both main conductors, and a fusible switch or circuit breaker and switch that feed a distribution transformer. The metal enclosed unit connects to the transformer either through a bus throat of standardized dimensions, or else through cables and is usually installed outdoors. Ring main cables enter and leave the cabinet. This type of switchgear is used for medium-voltage power distribution. The medium-voltage ring main unit (RMU) is a modular medium-voltage switchgear with a voltage level of usually 10kV~40.5kV. It realizes power distribution, fault isolation and protection through ring topology, and supports multiple power supply access to improve power supply continuity. The analysis of market driving factors mainly includes the following:

1. Policy and standard promotion
Smart grid construction: The National Energy Administration's "Action Plan for High-quality Development of Distribution Networks" requires that 30% of the existing SF6 ring main unit be transformed by 2027.
2. Growth in new energy and electricity demand
Grid connection of renewable energy: The demand for medium-voltage ring main units in wind power and photovoltaic stations has surged. The increase in electricity consumption in the whole society has driven the demand for distribution network equipment upgrades.
3. Technological innovation and upgrading
Intelligent trends: AI fault diagnosis and digital twin technology penetration rates have increased.
Green energy-saving materials: New epoxy resins increase the mechanical strength of insulation parts by 30%, and the cost share of silicon carbide

power devices has increased to 18%.4. Regional markets and exportsDomestic regional differences: The Yangtze River Delta (36%) and the Pearl River Delta (28%) are the core of innovation, and the growth rate of infrastructure investment in the central and western regions exceeds the industry average by 2 percentage points.The medium-voltage ring main unit market continues to grow driven by policies, technologies and demands. Domestic and foreign companies are jointly expanding the market through differentiated competition (foreign companies focus on high-end intelligence, while domestic companies focus on cost-effectiveness and customization). In the future, environmental protection, intelligence and modularization will become the core directions, and overseas markets and industrial integration will provide new growth momentum.

The global Medium Voltage Ring Main Units market size was estimated at USD 4264.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
