Report Overview:

Melamine-based flame retardant is a commonly used flame retardant, which is used to improve the flame retardancy of materials. It is a compound made from melamine and its derivatives. Melamine-based flame retardants can release nitrogen and non-toxic ammonia under high temperature conditions, and these gases can dilute the oxygen in the combustion environment and form a flame-retardant atmosphere. In addition, melamine-based flame retardants can also form a protective layer of oxidized phosphates to prevent the spread of flames. Melamine-based flame retardants are widely used in plastics, rubber, textiles, coatings and other materials to improve their flame-retardant properties. It has been widely used in furniture, electronic products, building materials and other fields.

The Global Melamine Based Flame Retardant Market Size was estimated at USD 420.78 million in 2023 and is projected to reach USD 557.47 million by 2029, exhibiting a CAGR of 4.80% during the forecast period.
