Report Overview

Melamine-based flame retardant is a commonly used flame retardant, which is used to improve the flame retardancy of materials. It is a compound made from melamine and its derivatives. Melamine-based flame retardants can release nitrogen and non-toxic ammonia under high temperature conditions, and these gases can dilute the oxygen in the combustion environment and form a flame-retardant atmosphere. In addition, melamine-based flame retardants can also form a protective layer of oxidized phosphates to prevent the spread of flames. Melamine-based flame retardants are widely used in plastics, rubber, textiles, coatings and other materials to improve their flame-retardant properties. It has been widely used in furniture, electronic products, building materials and other fields.
