Abstracts

Melt blown non woven fabric is a specialized material primarily produced through a melt blowing process, where polymer granules?most commonly polypropylene?are melted, extruded through fine nozzles, and drawn by high-velocity hot air into microfibers that are randomly deposited and bonded into a web. This results in a fabric characterized by its fine fibers, high surface area, and exceptional filtration efficiency, making it a critical component in applications such as medical masks, air and liquid filters, oil absorbents, hygiene products, and insulation materials. The material's performance is largely defined by parameters like fiber diameter, pore size, and basis weight, which can be tailored during manufacturing to meet specific functional requirements across industries.

The global Melt Blown Non Woven Fabric market size was estimated at USD 5100.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
