### Report Overview

A molten pool monitoring camera is a camera device used to monitor and record the state of the molten pool (usually the area where metal is melted). It is commonly used in industrial fields, especially in processes such as metal smelting, welding and melting. Melt pool monitoring cameras are usually designed with high temperature, corrosion resistance and high pressure resistance to adapt to the harsh working environment. They are often installed in close proximity to furnaces or melting equipment in order to clearly capture what is happening in the melt pool. These cameras can provide high-resolution real-time images or videos to help operators understand the state of the melt pool in real time. By monitoring the molten pool, the operator can judge the temperature of the molten pool, the melting rate, the flow of liquid metal and possible abnormal conditions, such as bubbles, uneven melting, etc.
