Report Overview

The diaphragm check valve consists of a flexible diaphragm and a valve body. The diaphragm opens when the fluid flows to prevent reverse flow. When the fluid flows in one direction, the diaphragm is pushed open to allow the fluid to pass; when the fluid tries to flow back, the diaphragm closes to prevent the fluid from flowing back. The diaphragm check valve has the advantages of good sealing performance, quick response, simple structure and easy maintenance. Diaphragm check valves are widely used in water treatment, pump systems, chemical industry and other occasions to protect equipment and systems from reverse flow.
