Abstracts

The Membrane Plasma Separator is a specialized medical device used in therapeutic apheresis procedures to selectively separate plasma from whole blood via a semi-permeable membrane, allowing for the removal of pathogenic substances?such as autoantibodies, immune complexes, or toxins?while retaining cellular components (red blood cells, white blood cells, and platelets), which are then returned to the patient; this technology is primarily applied in treating autoimmune disorders, neurological conditions like Guillain-Barre syndrome, and certain metabolic or hematologic diseases, offering a targeted, efficient, and often safer alternative to older centrifugation-based plasma exchange systems.

The global Membrane Plasma Separator market size was estimated at USD 150.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
