Report Overview:

Biogas upgrading equipment (biogas upgrader) is a facility that is used to concentrate the methane in biogas to natural gas standards. The system removes carbon dioxide, hydrogen sulphide, water and contaminants from the biogas. Often more suitable for small to medium-sized projects, the membrane separation technology uses permeation to filter out larger methane molecules from the smaller carbon dioxide molecules. Membrane upgraders have a small footprint, a low methane slip, require little maintenance, and achieve high quality and gas production; all of which has helped to become the most popular biogas upgrading technology in the world today.

The Global Membrane Separation Biogas Upgrading System Market Size was estimated at USD 94.16 million in 2023 and is projected to reach USD 111.13 million by 2029, exhibiting a CAGR of 2.80% during the forecast period.
