The Memory-based Valet Parking Assist system is an advanced intelligent parking technology that integrates environmental perception, HD mapping, high-precision positioning, and autonomous control algorithms. It allows a vehicle to park and retrieve itself automatically after the driver leaves, delivering a truly unmanned parking experience. The system can autonomously detect parking spaces, plan optimal routes, and avoid obstacles safely in complex environments, making it widely adopted in premium vehicles and intelligent driving platforms. The product has an average gross margin of approximately 36%. Its industrial chain upstream includes data resources, algorithm frameworks, development and simulation toolchains, basic software platforms, and cloud-based training and management systems, with representative suppliers such as NVIDIA and Qualcomm. The midstream involves system algorithm integration, perception fusion module design, controller development, and vehicle validation, while the downstream includes new energy and fuel vehicle manufacturers, with representative customers including Tesla, BMW, Mercedes-Benz, NIO, and BYD. The Memory-based Valet Parking Assist system is emerging as a pivotal application in the evolution of vehicle automation and intelligent driving. With ongoing advancements in high-definition mapping, perception algorithms, and computing platforms, its reliability and adaptability are rapidly improving. The system enables fully unmanned parking and retrieval in complex environments such as underground garages and commercial parking lots, significantly enhancing user convenience. In the future, as the penetration of new energy and premium intelligent vehicles continues to rise, Memory-based Valet Parking Assist is expected to expand from luxury to mid-range models, becoming a standard feature of intelligent driving systems.
