Abstracts

MEMS e-cigarette airflow sensor, also called MEMS microphone, is a crucial component in e-cigarettes, based on Micro-Electro-Mechanical System technology. It consists of microstructures like a diaphragm and electrodes. When a user takes a puff, the airflow change causes the diaphragm to vibrate, which is then transformed into an electrical signal through mechanisms such as piezoresistive or capacitive effects. This signal is sent to the e-cigarette's control unit, enabling it to accurately detect the suction action, regulate the atomizer's power, and adjust the vapor output accordingly. With features of high sensitivity, quick response, compact size, and excellent stability, it ensures a smooth and consistent vaping experience.

The global MEMS E-Cigarette Airflow Sensor market size was estimated at USD 372.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.20% during the forecast period.
