Abstracts

Microelectromechanical systems (MEMS) are micrometer-scale devices that integrate electrical and mechanical elements. This technology includes very small, moving mechanical parts, and electrical components and is used to fabricate sensors such as accelerometers, gyroscopes, digital compasses, inertial modules, pressure sensors, humidity sensors, and microphones. According to our research, the global Electronic Components market is approximately USD 466.61 billion in 2022. The Asia-Pacific region is a major market for electronic components. The downstream application fields of the electronic components industry are extensive, including communication equipment, consumer electronics, automotive electronics, smart home, industrial control, military security and other fields. Unlike the strong industry demand in 2021, downstream industry demand in 2022 showed a differentiated trend. The demand for traditional electronic applications represented by mobile phones and computers has turned weak, which has a greater impact on the demand of the entire industry; the demand for communication equipment and data centers has maintained growth but slowed down, and the industrial and Internet of Things driven by digital transformation and the development of artificial intelligence technology. The steady growth of application demand and the accelerated development of the new energy vehicle market can offset the decline in some consumer markets and provide support for long-term demand growth.

The global MEMS (Micro-Electromechanical System) Sensor market size was estimated at USD 1695.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
