Abstracts

MEMS Microbolometer is an infrared resistive thermal sensor manufactured based on microelectromechanical system (MEMS) technology. It is built on a silicon signal readout integrated circuit (ROIC) and is based on a thermal sensor prepared by micromachining technology. MEMS microbolometers usually include a microbridge structure, which is composed of multiple layers of materials, including an absorption layer for absorbing infrared radiation, a thermistor layer that converts temperature changes into voltage (or current) changes, and bridge arms and piers that serve as support and electrical connections. MEMS microbolometers have high resolution and high sensitivity, and are widely used in military and civilian fields such as fire rescue, large-area temperature measurement, and drone payloads.

The global MEMS Microbolometer market size was estimated at USD 946.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.10% during the forecast period.
