## Abstracts

MEMS sensor foundry solutions refer to providing design companies with a one-stop service from prototype development to mass manufacturing, covering process development, wafer manufacturing, packaging and testing. This model is based on light assets and high technological barriers, and its gross profit margin is generally higher than that of traditional foundry businesses. The industry's gross profit margin is approximately 60-80%. MEMS foundry is in the midstream of the industry chain, with design companies and material suppliers upstream and end applications (consumer electronics, automotive, medical) downstream. The main market drivers include: Technological iteration driving demand upgrades MEMS sensors are evolving from single-function to multi-parameter fusion, such as inertial sensors integrating accelerometers, gyroscopes, and magnetometers to form 9-axis solutions. This technological upgrade requires foundries to have cross-disciplinary process integration capabilities, such as combining DRIE etching with CMOS circuit manufacturing, driving the industry towards high-value-added areas. Simultaneously, emerging technologies (such as MEMS LiDAR and biochips) place higher demands on manufacturing precision, forcing foundries to invest in R&D resources. Expanding application scenarios creating incremental space The widespread adoption of the Internet of Things (IoT), autonomous driving, and medical electronics is generating new demand. In the IoT field, each smart terminal needs to integrate 3-5 MEMS sensors, and the number of global IoT devices is expected to exceed 20 billion by 2025. In autonomous driving, Level 3 autonomous driving requires more than 200 sensors, among which MEMS inertial navigation systems, with an error of less than 6 meters in scenarios without GPS signals, have become key components. In medical electronics, wearable devices (such as continuous glucose monitors) rely on MEMS biosensors for real-time monitoring. The explosive growth of these scenarios provides a vast market for foundries. Policy and capital are accelerating industry consolidation Many countries worldwide have

designated MEMS as a strategic industry, supporting domestic companies through subsidies and tax incentives. For example, China's 14th Five-Year Plan explicitly supports the research and development of high-end sensors, promoting the transformation of the industry chain towards self-reliance and control. At the capital level, leading companies are rapidly expanding through mergers and acquisitions. For instance, TSMC acquired Germany's X-Fab MEMS production line to enhance its automotive-grade manufacturing capabilities; and MEMSensing raised funds through a private placement to build a TSV packaging line, increasing its high-end production capacity. Driven by both policy and capital, industry concentration continues to increase, with leading companies further consolidating their market position based on their technological and scale advantages.

The global MEMS Sensor Foundry Solution market size was estimated at USD 884.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
