Report Overview

Menthyl ethylamido oxalate is a synthetic compound primarily used in skincare and cosmetic formulations, valued for its cooling and soothing properties similar to menthol but with enhanced stability and reduced irritation potential. It functions as a transient receptor potential (TRP) channel modulator, providing a prolonged cooling sensation by activating cold-sensitive receptors in the skin. The compound is increasingly adopted in products like moisturizers, sunscreens, aftershaves, and anti-aging serums, driven by consumer demand for multifunctional ingredients that combine sensory benefits with skincare efficacy. The market for menthyl ethylamido oxalate is growing within the broader personal care and cosmetics industry, particularly in premium and performance-driven segments, as brands seek innovative, science-backed ingredients to differentiate their offerings. Regulatory approval in key regions, along with rising interest in bio-based and sustainable cooling agents, further influences its adoption. However, competition from natural alternatives (e.g., menthol derivatives, peppermint extracts) and cost considerations may pose challenges to widespread commercialization.
